Re Item III

Non-establishment of opinion with regard to novelty, inventive step and industrial applicability

Claims 26-30 relate to subject-matter considered by this Authority to be covered by the provision of Rule 67.1(iv)PCT. Consequently, no opinion will be formulated with respect to the industrial applicability of the subject-matter of this claims(article 34(4)(a)(I)PCT).

Re Item V

Reasoned statement under Rule 66.2(a)(ii) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Reference is made to the following documents

- D1: ZIMMERMANN J ET AL: "Phenylamino-pyrimidine (PAP) derivatives: a new class of potent and highly selective PDGF-receptor autophosphorylation inhibitors" BIOORGANIC & MEDICINAL CHEMISTRY LETTERS, OXFORD, GB, vol. 6, no. 11, 4 June 1996 (1996-06-04), pages 1221-1226, XP004134858 ISSN: 0960-894X

- D5: WO 03/022833 (SMITHKLINE BEECHAM PLC) 20 March 2003

2. Novelty (article 33(1) and (2)PCT)

The present application describes compounds of formula(I) (see present claim 1), wherein R1 is a phenyl or heteroaryl radical and R2 is a phenyl radical, the abovementioned moieties can be substituted or not (see description page 3-paragraph 6).

D4-D5 disclosed RAF inhibitors which present a completely other core-structure, therefore they are disregarded for the assessments of the novelty of the present subject-matter.

BEST AVAILABLE COPY

The 2-pyrimidyl derivatives 3-7, 13-14 disclosed by D1 (see scheme 1 and table 1) are novelty destroying embodiments for the present claimed compounds (see present Claim 1), The general formulae claimed by Claims 4-7 of D2 present overlapping regions with the present claimed formula (I) (claim 1). Moreover, the examples 1-16 disclosed by D2 are novelty-destroying embodiments for the present claimed general structure (I). D3 disclose compounds of formula (I) (see Claim 1), which present an overlapping region with the present claimed compounds of formula (I), when R is methyl, Z is NHCOX(see Claims 1 and 6 of D3 and present Claim 1). Moreover, the examples 8, 16, 17, 18, 21, 22, 29, 30, 32, 34, 36, 37, 39, 46, 51-53, 55-56, 78, 81 and 82 are novelty-destroying embodiments for the present claimed structure (I). The (4-pyridin-2yl-pyrimidin-2yl-)amine as the corresponding 4-pyridin-3-yl and 4-pyridin-4-yl amine disclosed by D3 (see Claim 3 of D3 when Z is NH2) are novelty destroying for the subject-matter claimed by the present Claim 33. Consequently, the novelty of compounds of formula (I) claimed by the present Claim 1 cannot be acknowledged.

3. Inventive step (Article 33(1) and (3)PCT)

Since, the documents D1-D3 disclose compounds and general formulae which are either novelty destroying embodiments or present overlapping regions with the present general structure (I), an inventive step can be discussed only for the compounds which are novel over the cited prior art documents (e.g. compounds of formulae II-V).

The present application describes compounds of formula (I) for which R1 is a phenyl or heteroaryl moiety and R2 is a phenyl moiety as RAF kinase inhibitors and therefore useful to treat proliferative diseases.

D2, which can be regarded as being the closest prior art, disclosed compounds which differ from the present compounds of formulae (II-V) only through the substitution of present R1 moiety (see present structures II-V and the examples of D2). The compounds disclosed by D2 are also useful in treatment of proliferative diseases and moreover they can act in the Map kinase pathway (see D2 -page 6-paragraph 3). It appears to be irrelevant that D1-D3 do not disclose specifically the RAF kinase affinity of 2-amino-pyrimidyl derivatives, since it refer to the same use in terms of disorders to be treated (proliferative diseases). The possible discovery of a specific mechanism cannot be taken as an objective problem and

PCT/EP2004/006317

eventually an inventive step as such. As it was shown, the compounds of D1-D3, are appropriate to treat exactly the same diseases as the compounds of the present application. Since it is not clear from the present application in comparison with the prior art compounds that other diseases could be treated with the present compounds, the prior art compounds should be considered as technically equivalent with the present compounds. Consequently, no inventive step can be acknowledged for the present subject-matter as it is not yet shown by appropriate information, e.g. in form of experimental data, either that substantially all the claimed compounds have un unexpected property or improved activity over the structurally closest prior art compounds, which is attributable to the distinguishing feature of the invention or that other not disclosed disease by the prior art can be treated by the present compounds.
